

# MATLAB Drive Links for Programming Section (and Supplemental YouTube Videos)

**Note:** All teacher folders have the student live scripts as well as the “teacher solutions”, all live scripts are labeled “part 1” (the develop) or “part 2” (the deploy) to make it clear which comes first. Both student and teacher folders contain the necessary files for importing (if that lesson imports files), which can be found in the “data” folder for their respective sections, as well as respective parts within that section. To import files please right click the file in your “File” tab on the left within the “Data” folder and choose the option “copy path”. You can then use this path anywhere that requires a file name such as user input or reading in files or images.

\*These are view only links and must be copied into your own MATLAB Drive by clicking “Open in MATLAB Online” then copy.
